Santos Basin Salt Isochron

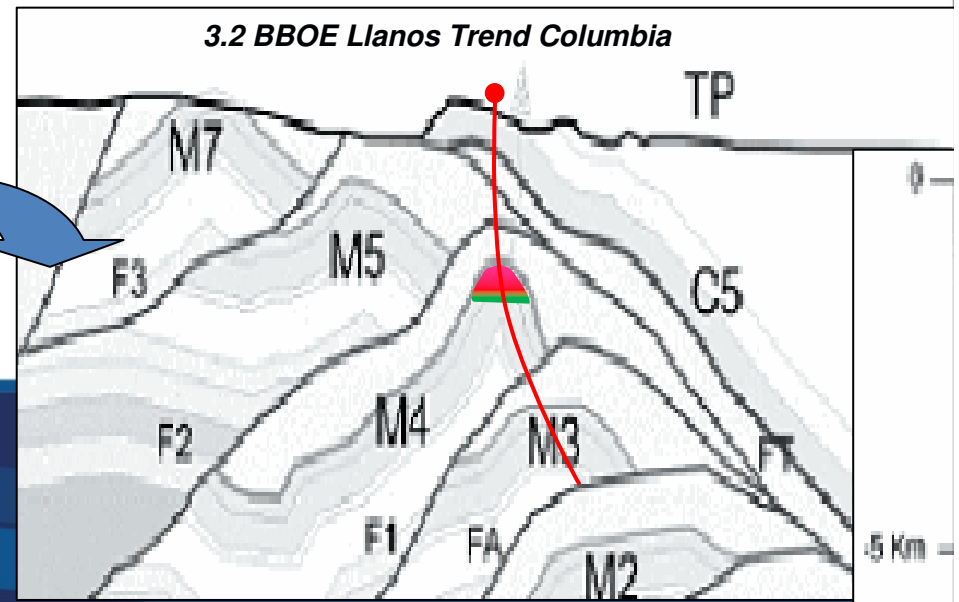

Eastern Carpathians

Llanos Trend_Gibraltar Field, Columbia 600 BCF (1.7 MMTonnes)_15 MMBB Oil (2 MMm³)

CONCLUSIONS

- The decline of reserves in Romania is not a reflection of geological limitation or opportunity.
- There are exploration targets similar to large discoveries found in Brazil or Colombia.
 - Those fields were found through focused technological innovations that led to their discoveries and confirmation.
- We, at Prospectiuni, are ready to provide you that technical expertise as you move forward and find meaningful reserves, here, in Romania.

LET'S REVERSE THE DECLINE !
